

High-Repetition-Rate Lasers

FLINT-FL1

From 10 to 100 MHz repetition rate

Down to 50 fs pulse duration

High-power models, up to 20 W

High-energy energy models, up to 0.5 μ J

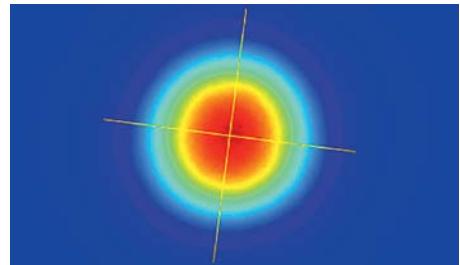

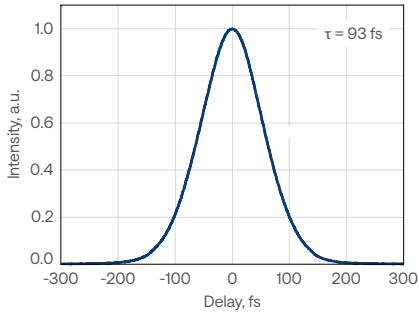

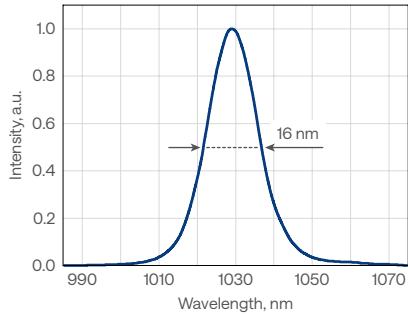

Industrial-grade design for high output stability

CEP stabilization or repetition rate locking

| | | 150 W |
| | | 1000 W |

¹⁾ For 20 W output power. Lower power models: 8 W and 12 W, are available upon request.

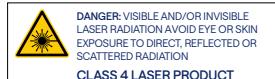

²⁾ Standard repetition rate is 80 MHz; custom repetition rate can be factory preset from the given range.

³⁾ Depends on the repetition rate. Values are given for 80 MHz.

⁴⁾ With enabled power-lock, under stable environmental conditions. Expressed as normalized root mean squared deviation (NRMSD).

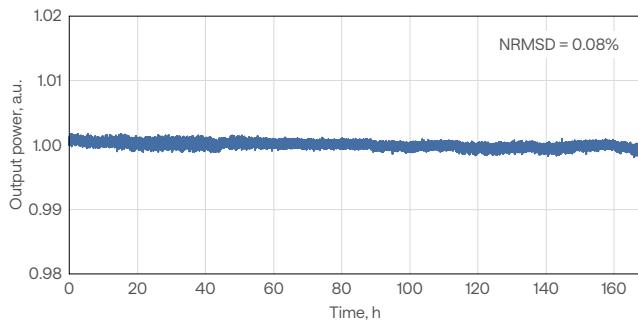

⁵⁾ For external 2H, or even 3H and 4H generation, refer to HIRO for FLINT.

⁶⁾ Conversion efficiency specified at maximum power.

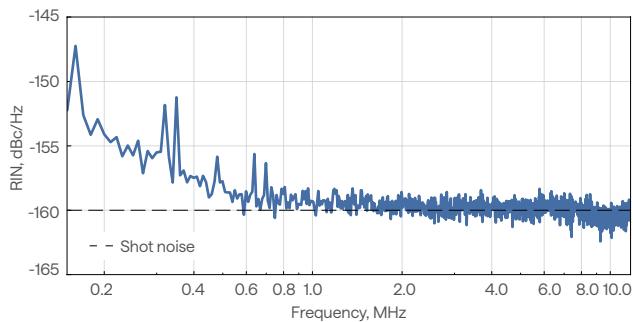

Stability

FLINT-FL2 (20 W) output power stability under harsh environmental conditions over 7 days

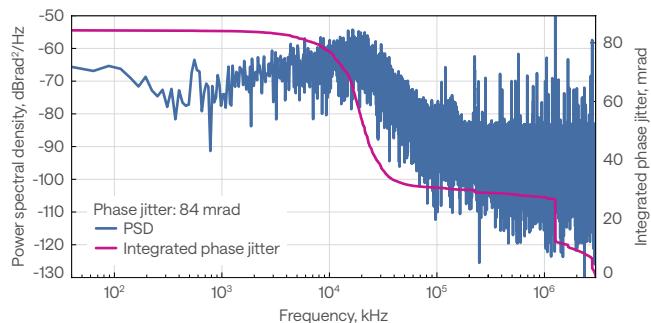

FLINT oscillator relative intensity noise (RIN), shot-noise limited at -160 dBc/Hz above 1 MHz

CEP stabilization

FLINT oscillators can be equipped with feedback electronics for carrier-envelope phase (CEP) stabilization of the output pulses. The carrier-envelope offset (CEO) of the oscillator is actively locked to 1/4th of the repetition rate with a < 100 mrad standard deviation.

Repetition rate locking

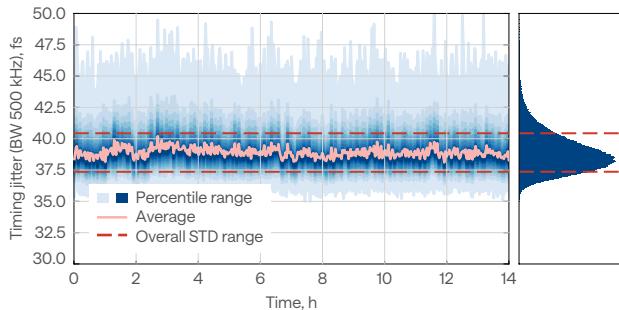

FLINT oscillators are customizable for repetition rate locking applications. Coupled with the necessary feedback electronics, the repetition rate can be synchronized to an external RF source using the two piezo stages installed inside the cavity.

locked to a 2.8 GHz RF source

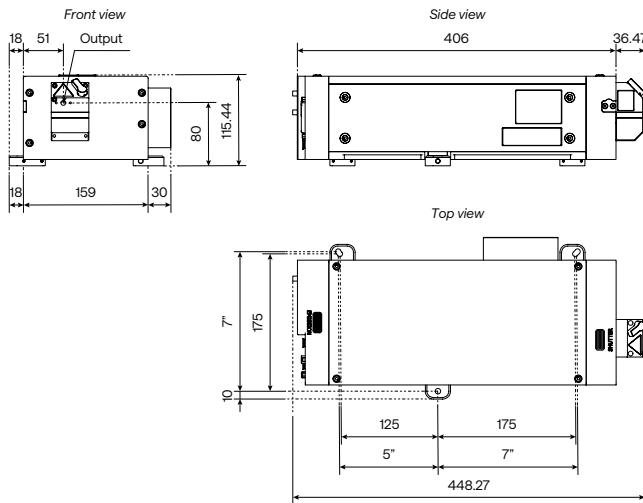

The repetition rate locking system can assure an integrated timing jitter of less than 200 fs for RF reference frequencies larger than 500 MHz. Continuous phase shifting is available upon request.
